

# «büchiflex» – the modular glass structural system with unique, flexible connection

For over 65 years, the name Büchi has stood for safety and economy in glass equipment construction. The founders of the company recognised at an early stage that the flexibility of each individual glass joint is of crucial importance for the operation and maintenance of the installations. The unique “büchiflex” connection as the basis of a complete glass structure system was developed. Since then it has proved itself in the demanding everyday life of the chemical and pharmaceutical industry.

The continued development of the system and its component today ensures incomparable reliability and enables the current standards and industry guidelines to be met.

## Modular assembly system

- High modularity: DN 15 - 600
- Wide choice of Büchi standard components increases efficiency of design, construction and delivery
- Efficient planning to meet customer needs
- Reliable supply of spare parts
- Makes quick changes possible
- Self emptying piping

## Flexibility

- Safety, glass protection
- Excellent tightness (TA Luft certified)
- Fast and easy installation
- Short service interventions

## Flamepolished glass

- No residues
- Efficient cleaning

## Metal flanges

- Proper earthing of system (ATEX)
- Springloaded flexible connection
